

Machine & Equipment

For driving, drilling, extracting, compacting from one single source.

The right machinery and equipment are the key for economical driving and extracting of sheet piling. As a system provider we supply everything for the customer demands to fulfill all technical and environmental requirements.

Our service in details.

- Driving, extracting, drilling and pressing equipment, even under extreme conditions, the equipment displays balanced performance, emits little noise and vibration and is thus kind to the environment.
- Anchor equipment is suitable for all soils and rock. Pit anchoring systems and a broad range of applications offer the highest possible standard of safety.
- Modular principle for the reliable securing of trenches and shafts. Shoring with trench sheeting and large-area shoring with shoring and piling frame panels to aluminum light-weight shoring and struts.
- Trenchless technology for the laying of supply and disposal pipelines with advanced technology.
- Solutions for flood protection, both for securing dikes in the long term and for temporary use in emergencies. We supply a versatile aluminum stop log system, glass flood protection systems and structures for waterproofing doors and windows.
- Construction machinery and equipment for a variety of applications like hydraulic hammers as well as demolition shears, pipe pullers, cutters, compressors, soil compactors and sand removal equipment.
